

MUHAMMAD DAVIAN SHAH

Kota Tangerang, Indonesia | daviannns789@gmail.com | [id.linkedin.com/in/muhammad-davian-shah-a510153b8](https://www.linkedin.com/in/muhammad-davian-shah-a510153b8) | <https://github.com/DavianShah>

PROFESSIONAL SUMMARY

Computer Science undergraduate at IPB University with hands-on experience in cybersecurity-oriented development, Linux systems administration, and server and platform management. Skilled in building local-first applications and terminal-based AI tooling, with practical exposure to CTF platforms and security-focused development workflows. Seeking opportunities in cybersecurity, infrastructure, and secure software development.

EDUCATION

IPB University <i>Bachelor of Computer Science, Bogor, Indonesia</i>	2025 - Present
SMAN 1 Tangerang <i>Science (IPA)</i>	2022 - 2025

EXPERIENCE

ITTODAY - Staff	May 2026 - Present
- Manage servers and platform infrastructure supporting the event. - Support platform operations and day-to-day server administration. - Gain hands-on experience with DevOps practices, server management, and platform management.	

PROJECTS

J.A.M.A.L - Local-First Terminal AI Assistant github.com/DavianShah/J.A.M.A.L
- Developed a terminal-based AI assistant with persistent sessions, project-aware assistance, web lookup, and provider and model switching. - Implemented SQLite-backed sessions and project-specific memory with bounded context handling. - Built security-conscious project inspection with secret redaction, restricted filesystem access, and hash-checked file modification workflows. - Designed controlled coding workflows with transaction-based changes, validation, rollback protection, and bounded task execution. - Implemented CTF-oriented artifact classification and bounded cryptographic solving workflows. - Integrated local model and OpenAI-compatible providers with API keys stored through the operating system keyring.
Studia - Student Companion Mobile Application github.com/DavianShah/Studia
- Developed a local-first student companion app using React Native, Expo, TypeScript, Expo Router, and SQLite. - Implemented course management, study schedules, grade calculations, task management, habit tracking, and Pomodoro focus sessions. - Designed SQLite migrations, typed query modules, database persistence, and development seed data. - Added unit and SQLite integration tests using Jest and maintained strict TypeScript type checking.
GZCTF / ITTODAY Platform
- Worked with the GZCTF-based CTF platform and existing project codebase. - Contributed to platform behavior, UI integration, and administrative access workflows. - Worked with Linux and server-side tooling as part of platform development and deployment activities.

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, C, C++
Software Development: React, React Native, Expo, Expo Router, Vite, Tailwind CSS
Database: SQLite
Cybersecurity: CTF, Burp Suite, PortSwigger Web Security Academy
DevOps / Systems: Linux, Bash, Git, GitHub, Docker, systemd, Server Management, Platform Management
AI / Automation: Llama.cpp, Agentic AI Agent, Automation Scripting
Testing: Jest, TypeScript Type Checking

ADDITIONAL

Languages: Indonesian, English
